Legal Dimension Of Cybercrime In India: An Overview

Dr. M. Kalimulluah* & Syed Asghar Raza**

ABSTRACT

Technology alters help for humanity, and the Internet has changed people's lives on the whole. One can communicate across the world through email. The data can be sent anywhere in a second or downloaded. The social network sides have facilities contacts with near and dear ones. Businesses are being conducted online. Almost everyone is accustomed to the virtual world and access the same. However, just like the real world, the virtual is not free from crime. These are the following crime that can be commuted as social crimes, for example, crime against the state, intellectual property crime, cried card fraud, cyberstalking, cyber-Terrorism.

Crime is an event that happens in each inhabited piece of the globe; the guilty parties and the casualties might have a place with various classifications. Rising utilization of P.C. and data innovation has missed every single world of personal existence of a man in the open arena, which is once in a while abused by the crooks for their benefits. Cybercrime seriously encroaches upon each circle of a singular's life. The dispersal and blast of the normal have had a significant effect on the manner individuals assemble data and convey it. Astounding accomplishments in the Data Innovation region is a subject of arrogance for the overall networks and India, yet the connected issue that is because the genuine alert is the quick expansion in Cybercrime

The convergence of computer networks and telecommunication facilitated by digital technology has a known origin to a shared space called' cyberspace''. This cyberspace has become the stage for a galaxy of human action which meets on the Internet. Internet is more and more being used for communication, commerce, advertising, banking, education, research, and entertainment. There is hardly any human activity that is not touched by the Internet. Law as the controller of human behavior, has made an entry into cyberspace and is trying to cope with its manifold challenges. Many believe that as the Internet has
