

# Threat Of Cyberterrorism

**Dr. Nishesh Sharma\***

---

Armed with the increasing knowledge of cyber technology, the terrorists are using 'encryption messages' to secretly communicate with each other. While cyber crime is a domestic issue which may have international ramifications, cyber terrorism is an international issue which may have domestic ramifications.

The importance of growing use of sophisticated computer software by cyber terrorists has to be understood to appreciate the application and utility of the Cyber Forensics investigations to catch the cyber terrorists by collecting and bringing the sophisticated and admissible electronic evidence to the court of law.

It is important to understand the possible threats brought about by cyberterrorism which is also sometimes referred to as cyber terrorism. It aims to discuss issues such as level of knowledge of Cyber Forensics to counter cyberterrorism and topics related to cyber terrorism and its perception and understanding in the Indian society. This is done by presenting the views of the respondent advocates regarding this issue.

Upon the knowledge of the issue, actions that are undertaken to fight cyberterrorism are also presented. This includes the concerns of the respondents regarding the effects of cyberterrorism on Internet users and the population in general. It is important to explore cybercrimes, cyber forensics and cyber terrorism in cyberspace.

Indian society is increasingly becoming technological and computer based. The roles of the virtual world in the everyday existence are becoming more and more essential. In various fields, there are various advantages that the computer technology offers such as in trade, education, commerce and in the government, but with the increasing advancement in the cyber applications there is now an increasing danger. This is in relation to the
